

# Allround performance for the most demanding requirements

## High-performance ATF specifically for Asian vehicles

**febi 29934 (1 litre)**  
**Ref. no. 08886-80506**

febi 29934 is a high-performance latest generation ATF, specifically designed for automatic transmissions in Asian vehicles. Being resistant to a high torque, it meets the vehicle manufacturers' requirements and even exceeds some manufacturers' standards.

**The ATF febi 29934 is specifically suitable for use in AISIN-WARNER automatic transmissions**, which are predominantly fitted in Asian vehicles, but also in some US American and European vehicles.

The high-performance ATF febi 29934 is characterised by a constantly high friction-coefficient and high level of wear protection. Excellent anti-ageing properties and oxidation stability ensure a long product life. **This fluid for Asian vehicles provides maximum wear protection and can be mixed with all branded ATFs.**

However, to maximise the full potential of febi 29934, febi bilstein recommends that you fully replace the ATF and flush the transmission and converter.

More information on oil, lubrication, antifreeze, brake fluid and thread lock can be found in the latest fluids leaflet 90451.

**Ask your febi distributor for febi bilstein replacement parts!**  
**All spare parts can be found on [www.febi.com](http://www.febi.com).**

### Recommended applications:

- JASO M315 Type 1A
- JWS 3309
- Dexron III
- BMW Mini
- Daewoo
