

febi 1001111

To fit: Volkswagen Group EA211 1.0, 1.2, 1.4, 1.5 & 1.6 MPI/TSI petrol engines

Fitting Tool for camshaft sprocket

febi camshaft sprocket fitting tool 1001111 is essential when working on any of the Volkswagen Group EA211 engines listed above.

The camshaft sprockets must be held when loosening the retaining bolts, which is required when setting or adjusting the engine's static timing, or when removing or replacing either the exhaust or inlet camshaft sprocket.

This tool is to be used in conjunction with febi Fitting Tool for timing belt 199627 when carrying out any engine repairs that require setting the engine timing, such as when replacing the timing belt.

It is often necessary to use two different pulley holding adaptors for different pulleys. The OE method involves swapping the working heads of the holding tool, which is time consuming. The febi double ended holding tool is designed so that no adaptor swapping is required, therefore saving time.
