Fixed Spindle Brake with winding handle and cable pulley

EN

## Fixed Spindle Brakes from febi - Secure stop in all conditions

Even though the function of Fixed Spindle Brakes has now been largely replaced by spring-loaded diaphragm brake cylinders, they still have their place in the commercial vehicle market today. Mainly agricultural vehicles and older trailers are still equipped with them. Since Fixed Spindle Brakes are part of the vehicle's braking system as parking brakes, the safety aspect is of course particularly important. For this reason, febi parking brakes have been tested and certified by an independent testing organization for manual force at the crank, transmission ratio, efficiency and the resulting spindle force.

You too can rely on the tested and certified quality and safety of febi Fixed Spindle Brakes.

The febi Fixed Spindle Brakes are available in two versions: With cable pulley under febi 109157 and without cable pulley under febi 109158.
